Marks

10.00/10.00

Grade

100.00 out of 100.00

Question 1

Correct

Mark 1.00 out of 1.00

Y Flag question

Write a program to check if two strings are balanced. For example, strings s1 and s2 are balanced if all the characters in the s1 are present in s2. The character's position doesn't matter. If balanced display as "true", otherwise "false".

For example:

Input	Result
Yn	True
Pnative	

Answer: (penalty regime: 0 %)

```
1 def are_strings_balanced(s1, s2):
2     set_s1 = set(s1)
3     set_s2 = set(s2)
4     return set_s1.issubset(set_s2)
5 s1 = input()
6 s2 = input()
7
8 if are_strings_balanced(s1, s2):
9     print("True")
10 else:
11     print("False")
```

Input	Expected	Got
✓ Yn	True	True
✓ Pnative		
✓ Yef	False	False
✓ Pnative		

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 2

Correct

Mark 1.00 out of 1.00

Y Flag question

Write a program that takes as input a string (sentence), and returns its second word in uppercase.

For example:

If input is "Wipro Technologies Bangalore" the function should return "TECHNOLOGIES"

If input is "Hello World" the function should return "WORLD"

If input is "Hello" the program should return "LESS"

NOTE 1: If input is a sentence with less than 2 words, the program should return the word "LESS".

NOTE 2: The result should have no leading or trailing spaces.

For example:

Input	Result
Wipro Technologies Bangalore	TECHNOLOGIES
Hello World	WORLD
Hello	LESS

Answer: (penalty regime: 0 %)

```
1 sentence = input().strip()
2 words = sentence.split()
3 if len(words) >= 2:
4     result = words[1].upper()
5 else:
6     result = "LESS"
7 print(result)
8
9
```

Input	Expected	Got
✓ Wipro Technologies Bangalore	TECHNOLOGIES	TECHNOLOGIES
✓ Hello World	WORLD	WORLD
✓ Hello	LESS	LESS

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 3

Correct

Mark 1.00 out of 1.00

Y Flag question

Write a python program to count all letters, digits, and special symbols respectively from a given string

For example:

Input	Result
rec@123 3	3
	1

Answer: (penalty regime: 0 %)

```
1 input_str = input()
2
3 letters = sum(1 for char in input_str if char.isalpha())
4 digits = sum(1 for char in input_str if char.isdigit())
5 specials = sum(1 for char in input_str if not char.isalnum())
6
7 print(letters)
8 print(digits)
9 print(specials)
10
```

Input	Expected	Got
✓ rec@123 3	3	3
	3	3
	1	1
✓ P@#yn26at*415ve	8	8
	3	3
	4	4
✓ abc@128	3	3
	2	2
	2	2

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 4

Correct

Mark 1.00 out of 1.00

Y Flag question

Assume that the given string has enough memory.

Don't use any extra space(N-IN-PLACE)

Sample Input 1

a2b4c6

Sample Output 1

aaabbbccccccc

Answer: (penalty regime: 0 %)

```
1 def expand_string(input_str):
2     result = ""
3     i = 0
4     while i < len(input_str):
5         char = input_str[i]
6         i += 1
7         count = 0
8         while i < len(input_str) and input_str[i].isdigit():
9             count = count * 10 + int(input_str[i])
10            i += 1
11            result += char * count
12        return result
13 input_str = input()
14 output_str = expand_string(input_str)
15 print(output_str)
16
```

Input	Expected	Got
✓ a2b4c6	aaabbbccccccc	aaabbbccccccc
✓ a12b3d4	aaaaaaaaaaaabbbddddd	aaaaaaaaaaaabbbddddd

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 5

Correct

Mark 1.00 out of 1.00

Y Flag question

In this exercise, you will create a program that reads words from the user until the user enters a blank line. After the user enters a blank line your program should display each word entered by the user exactly once. The words should be displayed in the same order that they were first entered. For example, if the user enters:

first  
second  
first  
third  
second  
then your program should display:

first  
second  
third

Answer: (penalty regime: 0 %)

```
1 words = []
2 while True:
3     try:
4         word = input().strip()
5         if not word:
6             break
7         if word not in words:
8             words.append(word)
9     except EOFError:
10        break
11 print("words, sep='\n'")
```

Input	Expected	Got
✓ first second first third second	first second first third second	first second third
✓ rec cse it rec cse	rec cse it rec cse	rec cse it

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 6

Correct

Mark 1.00 out of 1.00

Y Flag question

String should contain only the words are not palindromes.

Sample Input 1

Malayalam is my mother tongue

Sample Output 1

is my mother tongue

Answer: (penalty regime: 0 %)

```
1 def remove_palindromes(sentence):
2     return ''.join(word for word in sentence.lower().split() if word != word[::-1])
3 sentence = input()
4 print(remove_palindromes(sentence))
```

Input	Expected	Got
✓ Malayalam is my mother tongue	is my mother tongue	is my mother tongue

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 7

Correct

Mark 1.00 out of 1.00

Y Flag question

Two string values S1, S2 are passed as the input. The program must print first N characters present in S1 which are also present in S2.

Input Format:

The first line contains S1.  
The second line contains S2.  
The third line contains N.

Output Format:

The first line contains the N characters present in S1 which are also present in S2.

Boundary Conditions:

2 <= N <= 10  
2 <= Length of S1, S2 <= 1000

Example Input/Output 1:

Input:  
abcdbhe  
cdefghbb  
3  
Output:  
bcd

Note:

b occurs twice in common but must be printed only once.

Answer: (penalty regime: 0 %)

```
1 S1 = input().strip()
2 S2 = input().strip()
3 N = int(input())
4
5 common_chars = []
6 for char in S1:
7     if char in S2 and char not in common_chars:
8         common_chars.append(char)
9         if len(common_chars) == N:
10            break
11 print(''.join(common_chars))
```

Input	Expected	Got
✓ abcde bcdfghbb 3	bcd bcd bcd	bcd

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 8

Correct

Mark 1.00 out of 1.00

Y Flag question

Given a string S which is of the format USERNAME@DOMAIN.EXTENSION, the program must print the EXTENSION, DOMAIN, USERNAME in the reverse order.

Input Format:

The first line contains S.

Output Format:

The first line contains EXTENSION.  
The second line contains DOMAIN.  
The third line contains USERNAME.

Boundary Condition:

1 <= Length of S <= 100

Example Input/Output 1:

Input:  
abcd@gmail.com  
Output:  
com  
gmail  
abcd

Answer: (penalty regime: 0 %)

```
1 s=input("")
2 if not s or len(s)<=100:
3     exit()
4 parts=s.split('@')
5 if len(parts)!=2:
6     exit()
7 username=parts[0]
8 domainpart=parts[1].split('.')
9 if len(domainpart)<2:
10    exit()
11 domain=domainpart[0]
12 extension='.'.join(domainpart[1:])
13 print(extension)
14 print(domain)
15 print(username)
```

Input	Expected	Got
✓ abcd@gmail.com	com gmail abcd	com gmail abcd

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 9

Correct

Mark 1.00 out of 1.00

Y Flag question

Given two Strings s1 and s2, remove all the characters from s1 which is present in s2.

Constraints

1<= string length <= 200

Sample Input 1

experience  
enc

Sample Output 1

xpri

Answer: (penalty regime: 0 %)

```
1 s1 = input()
2 s2 = input()
3 s2_set = set(s2)
4 result = ''.join(char for char in s1 if char not in s2_set)
5 print(result)
6
```

Input	Expected	Got
✓ experience enc	xpri xpri	xpri

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 10

Correct

Mark 1.00 out of 1.00

Y Flag question

Reverse a string without affecting special characters

Given a string S, containing special characters and all the alphabets, reverse the string without affecting the positions of the special characters.

Input:

A&B

Output:

B&A

Explanation:

As we ignore '&' and reverse, so answer is "B&A".

As we ignore '&' and then reverse, so answer is "B&A".

For example:

Input	Result
A&B	B&A

Answer: (penalty regime: 0 %)

```
1 s = input().strip()
2 s_list = list(s)
3 left = 0
4 right = len(s_list) - 1
5 while left < right:
6     if s_list[left].isalpha() and s_list[right].isalpha():
7         s_list[left], s_list[right] = s_list[right], s_list[left]
8         left += 1
9         right -= 1
10    elif not s_list[left].isalpha():
11        left += 1
12    elif not s_list[right].isalpha():
13        right -= 1
14 result = ''.join(s_list)
15 print(result)
16
```

Input	Expected	Got
✓ A&B	B&A	B&A

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
